

SANJAY KRISHNAN

Frontend Software Engineer · React · TypeScript · JavaScript · GraphQL

Tamil Nadu, India · 9080565495 · er.sanjaykrishnan@gmail.com · [LinkedIn](#) · [GitHub](#)

[Immediate Joiner](#)

SUMMARY

Frontend Software Engineer with 2.5+ years building and operating production SaaS applications with React, TypeScript, JavaScript, and GraphQL. Track record of owning complex features end-to-end — frontend architecture, analytics platforms, third-party integrations, and application observability — while working directly with customers and cross-functional teams. Immediate joiner, open to Frontend Engineer, SDE1, and SDE2 roles.

EXPERIENCE

Beamer / Userflow — Software Development Engineer

Feb 2024 – Aug 2026

Remote

- Architected and led the frontend implementation of bidirectional Mixpanel synchronization across the product. Designed shared object-mapping infrastructure and schemaless data flows supporting customers with million-scale users and events.
- Designed and shipped a global analytics filtering system covering attributes, events, segments, time ranges, and grouping logic, including saved/reusable filters — driving 90%+ adoption among paying companies.
- Built and deployed an internal AI-powered support intelligence platform from the ground up (React, AI SDK, Python, OpenAI, Pinecone), ingesting Intercom conversations via webhooks into a conversational interface for querying historical customer interactions.
- Owned all production signup and onboarding flows end-to-end — Google OAuth, email verification, invitation-token signup, and company invitation workflows — across critical authentication paths.
- Established application observability across frontend and backend using Sentry, Elasticsearch/Kibana, and Grafana: error tracking, source-map based production debugging, CPU monitoring, product-adoption dashboards, and Slack alerting.
- Built complex D3.js analytics experiences with multiple metrics, dynamic filtering, grouping, and live data; extended Heap and Google Tag Manager tracking product-wide with attention to PII-safe data handling and GDPR compliance.
- Served as the primary technical point of contact for Support, resolving complex production issues; independently led frontend dependency and security upgrades across Vite, Rollup, TypeScript, and related tooling.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Node.js (*Working Knowledge: Python, Elixir*)

Frontend: React, React Hooks, D3.js, Tailwind CSS, Vite, HTML5, CSS3

APIs & Data: GraphQL, REST APIs

Analytics & Integrations: Mixpanel, Heap, Segment, Google Tag Manager, Intercom, HubSpot, Zapier, Stripe

Observability: Sentry, Grafana, Elasticsearch, Kibana

AI: OpenAI APIs, AI SDK, Pinecone

Engineering: Git, CI/CD, Performance Optimization, Frontend Observability, Production Debugging, Dependency & Security Management

ACHIEVEMENTS & HACKATHONS

- India Winner, Smart India Hackathon (SIHHW/20/54) — built an automated end-to-end system for chemical packaging (nano urea), competing nationally against teams across India.
- Delta Automation International Hackathon — built an end-to-end Industrial IoT platform (LAMP stack) integrating robotics with IIoT dashboards; enabled Amazon-style ordering where a placed order routed directly to a 3D-print job queue.
- Internal Hackathon — designed an AI-based "Smartflow" creator to auto-generate in-product user flows.
- Internal Hackathon — built an MCP agent integrated with the company's Userflow AI adoption agent, enabling end users to complete real-world tasks (e.g., booking appointments via the Calendly MCP) without leaving the chat interface.

EDUCATION

Bachelor of Engineering (B.E.) — Anna University

Tamil Nadu, India
